DVDEmand, Provides Venice Technologies a DVD album manufacturing service, an automated conversion and burning of digital pictures and digital or analog personal videos to a personalized DVD-R

DVDEmand, a developer of Print2DVD, which is a "DVD printer" that is integrated to Digital asset Management systems and web-service applications, presents a fully automated "DVD printer" solution for the digital photography market.

SHEFAYIM, Israel--(PR Web)--May 26, 2005--

Venice Technologies Ltd., an Israeli leading provider of digital photography online sharing, secure storage and high-quality prints, chose DVDEmand Print2DVD solution for providing DVD album creation service containing both personal digital pictures and videos. The service is provided at the company service site: www.pic.co.il.

"Venice technologies is committed to leadership in providing innovative services on our websites and portals, and the DVD album service fits to our strategy and positions PIC.CO.IL site as the leading site in its field. With Print2DVD our customers can create a photo "slide-show" DVD album that enhance the experience of viewing family and individual memories on a high quality DVD." said Shlomo Waldmann, chief executive officer of Venice Technologies.

Tal Dayan, DVDEmand's chief executive officer commented, "Integrating Print2DVD software to Venice Technologies service, created an automated solution for efficient manufacturing of DVDs from PIC.CO.IL photos and videos repository with full user personalization. The user can design the DVD for himself including choosing the DVD printing templates, pictures transition affects, background music and personalized text. We believe that our photography application is the most efficient application in the digital photography market place".

Print2DVD, is an automatic DVD authoring application that can be integrated into any Digital Asset Management system (DAM), allowing the printing of authored DVDs from a managed repository. Print2DVD has the following capabilities:

- Authors a DVD title in 45 seconds, the fastest authoring process in the market.
- Supports any type of media such as video, audio, software, or data in any format.
- Supports all standard duplication machines.
- Creates hybrid DVDs that can be viewed through DVD players and PC DVD-ROM drives.
- Each manufactured media is equipped with DVDEmand's proprietary DVDBrowser tool for efficient browsing on a PC.

About DVDEmand

Based in Shefayim, Israel, DVDEmand (<http://www.dvdeemand.com>) is the world's leading supplier of on-demand DVD and CD fulfillment server systems, based on its patent pending automated DVD authoring technology.

Established in 2000, DVDEmand Inc, a privately held company, is focused on advanced digital video applications. The commercial activity is focused on licensing CD and DVD on-demand applications to Media & Entertainment content owners, Libraries & Museums and to media service providers that serve content owners and corporations.

DVDeMand is committed to pushing digital video technology to the limit both in the replication and broadcast worlds, and to providing high quality products to its customer base.
